DeepSeek-R1
- 1. Model Size
- 2. Performance
- 3. Using DeepSeek-R1
  - 3.1 Running DeepSeek-R1
  - 3.2 Starting a Conversation
  - 3.3 Ending the Conversation
  - 3.4 Chinese Dialogue
- References

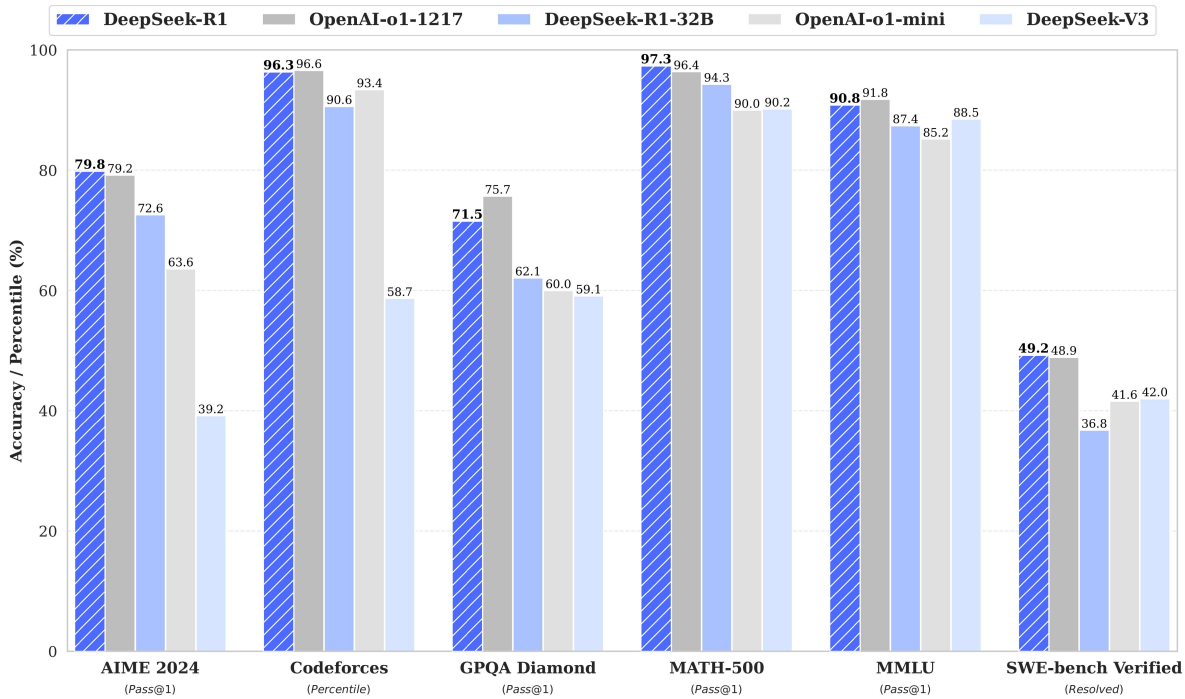
Note: Due to performance limitations, the Raspberry Pi 5 2GB and 4GB versions must run the reduced-parameter version.

DeepSeek-R1 is an open-source Large Language Model (LLM) designed by DeepSeek for understanding and generating code.

1. Model Size

Model	Size
deepseek-r1:1.5b	1.1GB
deepseek-r1:7b	4.7GB
deepseek-r1:8b	5.2GB

2. Performance

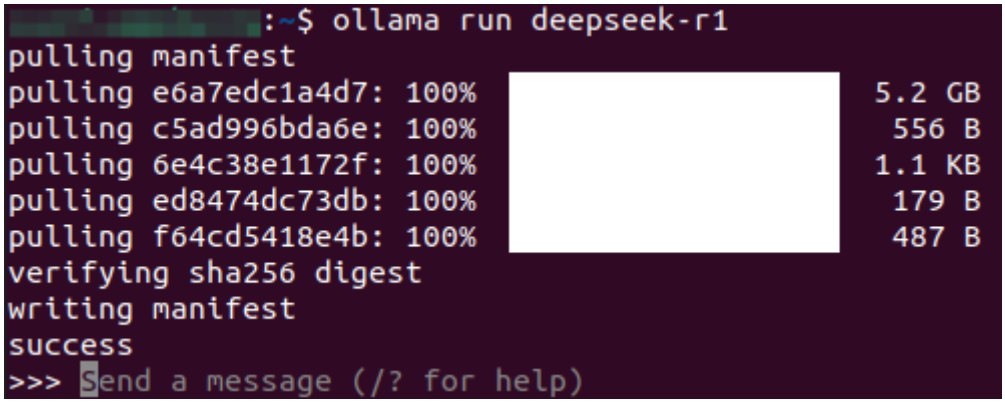


3. Using DeepSeek-R1

3.1 Running DeepSeek-R1

Use the run command to start running the R model. If the model is not downloaded, the model from the Ollama model library will be automatically downloaded:

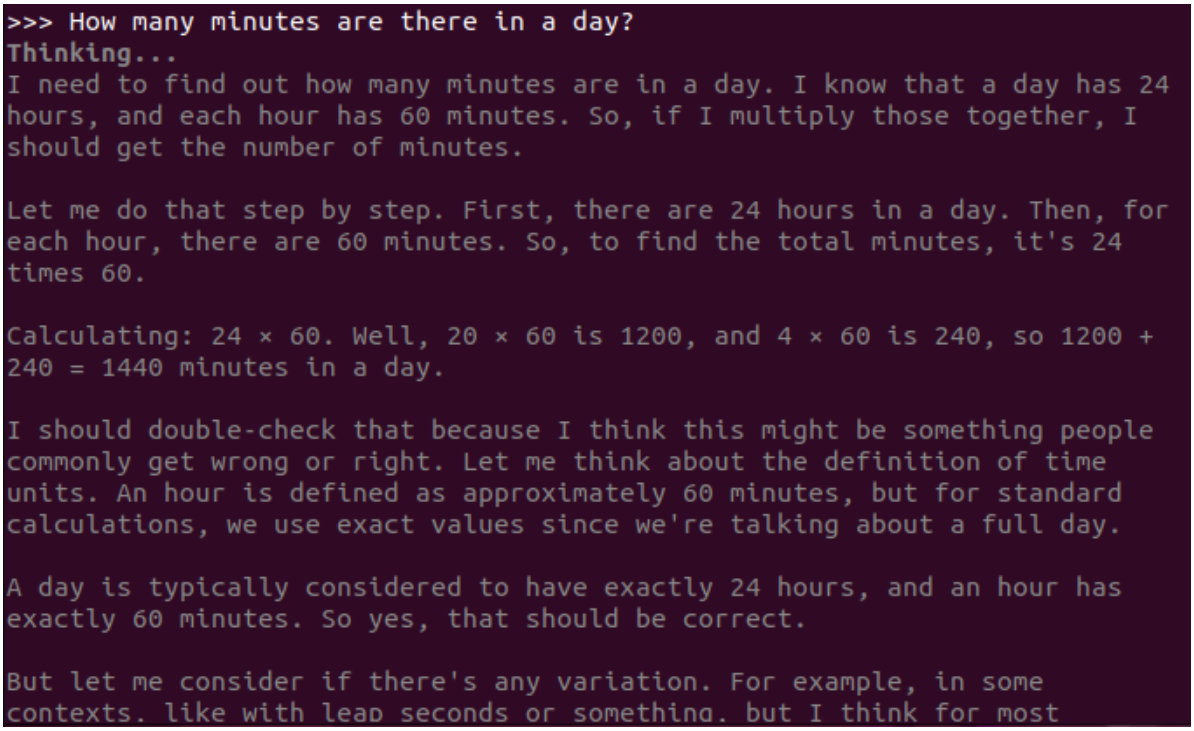
```
ollama run deepseek-r1:8b
```



3.2 Starting a Conversation

```
How many minutes are there in a day?
```

Response time depends on your hardware configuration, so please be patient!



3.3 Ending the Conversation

Use the `Ctrl+d` shortcut or `/bye` to end the conversation!

3.4 Chinese Dialogue

If you don't have a Chinese input method, please refer to the Chinese input method switching tutorial.

Chinese Dialogue:

```
>>> 一个小时是多少分钟？请用中文告诉我
Thinking...
嗯，用户这次问的是“一个小时是多少分钟”，并且明确要求用中文回答。看来ta可能是
在练习中英文转换，或者需要确认这个基础概念。

刚才我刚解释过一天有1440分钟，现在这个问题更简单些，但同样属于时间单位换算的
基础知识。用户特意强调中文，说不定是个正在学中文的人，或者是需要用中文和孩子
沟通的家长？

考虑到这是非常基础的问题，回答时要特别注意清晰度和准确性。先直接给出答案
“60分钟”，再补充说明小时与分钟的关系会更完整—毕竟1440分钟换算成24小时是常识
，但单独说一小时等于多少分钟可能对初学者更有帮助。

用户连续问了两个时间单位的问题，可能是为了建立关联记忆。比如先知道一天有
1440分钟，再理解其中包含24小时，每小时60分钟就能连贯起来了。不过目前只需要专
注回答当前问题就好。
...done thinking.

一个小时是 **60分钟**。
```
