Demonstration environment

Development Board: Raspberry Pi 5B

SD(TF)card: 64G (Above 16G, the larger the capacity, the more models can be experienced)

Raspberry Pi 5B (8G RAM): Run 8B and below parameter models
Raspberry Pi 5B (4G RAM): Run 3B and below parameter models, can't run Phi-3 model.

Phi-3 is a powerful and cost-effective Small Language Model (SLM) launched by Microsoft, which outperforms models of the same size and higher in various language, inference, coding, and mathematical benchmarks.

Model scale

Model	Parameter
Phi-3 (Mini)	3.8B
Phi-3 (Medium)	14B

Raspberry Pi 5B (8G RAM): Test Phi-3 model with 3.8B parameters!

Got Phi-3

Using the pull command will automatically pull the models from the Ollama model library.

```
ollama pull phi3:3.8b
```

Use Phi-3

Run Phi-3

If the system does not have a running model, the system will automatically obtain the Phi-3 3.8B model and run it.

```
ollama run phi3:3.8b
```

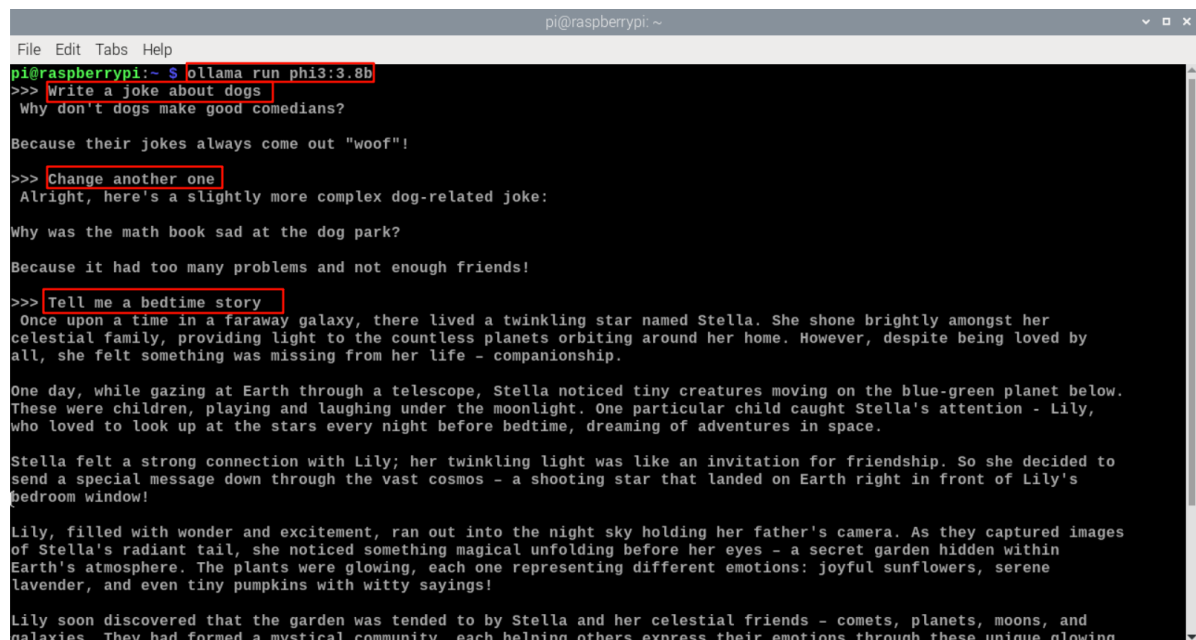

Dialogue

write a joke about dogs

Change another one

Tell me a bedtime story

The time to reply to the question is related to the hardware configuration, please be patient.

```

File Edit Tabs Help  
pi@raspberrypi:~$ ollama run phi3:3.8b  
>>> Write a joke about dogs  
Why don't dogs make good comedians?  
Because their jokes always come out "woof!"  
>>> Change another one  
Alright, here's a slightly more complex dog-related joke:  
Why was the math book sad at the dog park?  
Because it had too many problems and not enough friends!  
>>> Tell me a bedtime story  
Once upon a time in a faraway galaxy, there lived a twinkling star named Stella. She shone brightly amongst her celestial family, providing light to the countless planets orbiting around her home. However, despite being loved by all, she felt something was missing from her life - companionship.  
One day, while gazing at Earth through a telescope, Stella noticed tiny creatures moving on the blue-green planet below. These were children, playing and laughing under the moonlight. One particular child caught Stella's attention - Lily, who loved to look up at the stars every night before bedtime, dreaming of adventures in space.  
Stella felt a strong connection with Lily; her twinkling light was like an invitation for friendship. So she decided to send a special message down through the vast cosmos - a shooting star that landed on Earth right in front of Lily's bedroom window!  
Lily, filled with wonder and excitement, ran out into the night sky holding her father's camera. As they captured images of Stella's radiant tail, she noticed something magical unfolding before her eyes - a secret garden hidden within Earth's atmosphere. The plants were glowing, each one representing different emotions: joyful sunflowers, serene lavender, and even tiny pumpkins with witty sayings!  
Lily soon discovered that the garden was tended to by Stella and her celestial friends - comets, planets, moons, and galaxies. They had formed a mystical community, each helping others express their emotions through these unique glowing
