

YOLO Environment Setup

YOLO Environment Setup

This chapter applies to manual setup on Raspberry Pi 5 official image. If you are using the YAHBOOM version image, this tutorial can be ignored.

1. One-Click Installation

The following command automatically installs the environment required for yolov26, just wait patiently

```
pip install -U ultralytics
```

```
(1.16.0)
Requirement already satisfied: mpmath>=0.19 in ./local/lib/python3.11/site-packages (from sympy->torch>=1.8.0->ultralytics) (1.3.0)
Downloading polars_runtime_32-1.38.1-cp310-abi3-manylinux_2_17_aarch64.manylinux2014_aarch64.whl (42.0 MB)
42.0/42.0 MB 368.5 kB/s eta 0:00:00
Installing collected packages: polars-runtime-32, polars, ultralytics-thop, ultralytics
  Attempting uninstall: ultralytics
    Found existing installation: ultralytics 8.3.91
    Uninstalling ultralytics-8.3.91:
      Successfully uninstalled ultralytics-8.3.91
  Successfully installed polars-1.38.1 polars-runtime-32-1.38.1 ultralytics-8.4.21 ultralytics-thop-2.0.18
[notice] A new release of pip is available: 25.0.1 -> 26.0.1
[notice] To update, run: python -m pip install --upgrade pip
pi@raspberrypi:~$
```

The above prompt indicates installation is complete

After installation is complete, restart the Raspberry Pi

```
sudo reboot
```

Error Resolution

When directly entering the Jupyter Lab installation command in the terminal, you may encounter an "error: externally-managed-environment" error. You can use the following command to solve it: Modify the python version according to your system version. My current system version is 3.13

```
sudo mv /usr/lib/python3.13/EXTERNALLY-MANAGED /usr/lib/python3.13/EXTERNALLY-MANAGED.bk
```

```
pi@raspberrypi:~$ pip install -U ultralytics
error: externally-managed-environment

× This environment is externally managed
➤ To install Python packages system-wide, try apt install
  python3-xyz, where xyz is the package you are trying to
  install.

  If you wish to install a non-Debian-packaged Python package,
  create a virtual environment using python3 -m venv path/to/venv.
  Then use path/to/venv/bin/python and path/to/venv/bin/pip. Make
  sure you have python3-full installed.

  For more information visit http://rptl.io/venv

note: If you believe this is a mistake, please contact your Python installation or OS distribution provider. You can override this, at
the risk of breaking your Python installation or OS, by passing --break-system-packages.
hint: See PEP 668 for the detailed specification.
```

The following dependency error occurred during installation
