

C Language Environment Setup

C Language Environment Setup

1. Install Nano Editor
2. Install GCC Compiler

If you are using the factory image we provided, manual installation and configuration are not required.

1. Install Nano Editor

Nano is a text editor with an easy-to-use interface that supports basic text editing functions such as copy, paste, search, replace, etc.

- Installation command:

```
sudo apt-get install nano
```

- Usage: `sudo nano <file_name>`

Example: Create and edit a new Demo.txt file:

```
sudo nano Demo.txt
```

2. Install GCC Compiler

GCC stands for GNU Compiler Collection. It is a compiler suite developed by GNU. Due to its open-source nature and cross-platform features, GCC is widely used in developing various types of software, including operating systems, applications, embedded systems, etc.

- Installation command:

```
sudo apt-get install gcc
```

Later tutorials will demonstrate how to use GCC for compilation!

The screenshot shows a terminal window on a Raspberry Pi. The window has a title bar with icons for Raspberry Pi, a globe, a folder, and a terminal icon, followed by the text 'pi@raspberrypi: ~'. On the right side of the title bar are icons for Bluetooth, Wi-Fi, and a speaker, along with the time '20:06'. Below the title bar is a menu bar with 'File', 'Edit', 'Tabs', and 'Help'. The terminal content shows the following commands and output:

```
pi@raspberrypi:~ $ sudo apt-get install nano
Reading package lists... Done
Building dependency tree... Done
Reading state information... Done
nano is already the newest version (7.2-1).
0 upgraded, 0 newly installed, 0 to remove and 0 not upgraded.
pi@raspberrypi:~ $ sudo nano Demo.txt
pi@raspberrypi:~ $ sudo apt-get install gcc
Reading package lists... Done
Building dependency tree... Done
Reading state information... Done
gcc is already the newest version (4:12.2.0-3).
gcc set to manually installed.
0 upgraded, 0 newly installed, 0 to remove and 0 not upgraded.
pi@raspberrypi:~ $
```
